

Similasan Products & Diluted Mercury as Active Ingredient

Similasan Dry Eye Relief and Similasan Earache Relief do contain an extremely safe microdilution of inorganic mercury.

- ✓ Homeopathic dosages are highly diluted and applied “topically”. The remedies are not swallowed or inhaled, which are the primary means of toxic build up.
- ✓ Homeopathy is regulated by the FDA, unlike herbal products. This means these Similasan products have been determined “safe and effective” by the FDA.
- ✓ Mercurius solubilis (found in Earache Relief @ 15X) Mercurius Sublimatus (found in Dry Eye Relief @ 6X) are **inorganic** forms of mercury and the safest of the three types of mercury, which are listed below:
 - **Inorganic** (used in the two Similasan products) = least ability to cause toxicity or build up, because it is poorly absorbed by human skin and membranes.
 - **Organic** = found in fish and can accumulate in the body. Usually spread in the atmosphere by power plants. This ingestion or inhalation is the primary cause of mercury poisoning in the U.S.
 - **Elemental Mercury** = Slippery metallic material we see in thermometers. Passes through the body if ingested.
- ✓ The inorganic mercury found in Similasan products is so miniscule that it would be virtually impossible to build up to toxic levels in the body, even with regular use:
 - You would have to apply 512 billion doses¹ of Similasan Earache Relief ear drops to equal the amount of *organic* mercury in an average 4oz tuna steak.
 - You would have to apply 857 doses² of Similasan Dry Eye Relief to equal the amount of organic mercury found in an average 4oz tuna steak.
 - Remember, the forms of mercury used in Similasan products is inorganic and a highly diluted dose.
- ✓ Earache Relief inorganic mercury dosage = 0.0000000003 ppm. You’d have to apply 6.4 billion doses¹ Similasan Earache Relief to equal the amount of mercury the EPA allows in every 8oz glass of water.
- ✓ Dry Eye Relief inorganic mercury dosage = 0.224 ppm. You would need to apply more than 10 doses² to equal the amount of mercury the EPA allows in every 8oz glass of water.
- ✓ FDA’s allowable level of organic mercury in fish is 1.0 ppm
- ✓ **ACTIVE INGREDIENTS HAVE NO KNOWN SIDE EFFECTS**

¹ Assumes one dose = 5 drops in affected ear

² Assumes one dose = 2 drops in both eyes
